# Apache CloudStack

**VMware to KVM Migration**

**CloudStack Object Storage**

**OAuth2  
Authentication**

**CloudStack  
Snapshot Copy**

**Multi-tenancy**

**KVM Import**

**No Vendor Lock-in**

**VNF Appliances  
Support**

Apache CloudStack is a highly scalable IaaS cloud computing platform that provides an orchestration layer, automating the creation, provisioning and configuration of IaaS components. Because CloudStack leverages existing infrastructure, the costs and time for an organization to build a multi-tenant IaaS platform are greatly reduced.
